

# Grow your own fruit and vegetables

In nursery, lots of our early science is about exploring features of the natural world and observing how things change over time. Today's experiment will allow for lots of thinking and talking about natural features and change.

With this lovely sunshine it truly feels like spring is here, so what better time than now to have a go at growing some of your own fruit and vegetables.

With today's experiment we will learn about how to use leftovers and scraps to start growing your own fruit and veg.

Here is a quick video to show you how to start growing at home: <https://www.youtube.com/watch?v=Jze8utzpLhg>

- **Today, can you use some fruit or vegetable leftovers to start growing your own fruit and vegetables?**
- **Can you talk about what changes you think you will see?**
- **Can you record your experiment, maybe with a drawing?**

For those interested in other experiments, here is a good website full of ideas: <http://www.sciencefun.org/kidszone/experiments/>

Please feel free to adapt, extend and change the experiments if you are feeling creative. You can share your work or send a photograph of your work to your teacher at:
